CRM Workflow

From lead qualification to a won opportunity

This screenshot shows the 'Opportunity' stage for 'AKASH ENTERPRICE NEED CLOTHS'. The interface includes a top navigation bar with 'CRM', 'Sales', 'Leads', 'Reporting', and 'Configuration'. Below the navigation bar, there are tabs for 'New Quotation', 'Won', and 'Lost'. The main content area displays the opportunity details: 'Expected Revenue ₹ 65,00,000.00', 'Probability 0.00 %', 'Contact AKASH ENTERPRISES', 'Salesperson AJAY THAKUR', 'Expected Closing 16/08/2026', and 'Phone +91 98452 83645'. There are also sections for 'Internal Notes' and 'Extra Information'.

Opportunity with expected revenue, salesperson and expected closing date

This screenshot shows the 'Opportunity' stage for 'AKASH ENTERPRICE NEED CLOTHS' marked as 'Won'. The interface is similar to the previous screenshot, but the 'Won' tab is selected, and a green diagonal banner with the word 'WON' is visible in the top right corner. The main content area displays the opportunity details: 'Expected Revenue ₹ 65,00,000.00', 'Probability at 100.00 %', 'Contact AKASH ENTERPRISES', 'Salesperson AJAY THAKUR', 'Expected Closing 16/08/2026', and 'Phone +91 98452 83645'. There are also sections for 'Internal Notes' and 'Extra Information'.

Opportunity marked Won

- Lead = initial potential customer information; Opportunity = qualified sales possibility.
- Salesperson assignment, expected revenue, closing date and follow-up activities support pipeline management.
- The opportunity moves through stages and can generate a quotation; after successful sales confirmation it can be marked Won.

Sales Workflow

End-to-end customer order cycle

Commercial order is confirmed in Sales → physical stock movement is handled by Inventory → billing and settlement are handled by Invoicing/Accounting.

Product list showing Sales Price, Cost, On Hand and Forecasted quantities

- On-hand quantity shows current physical stock recorded by Odoo.
- Forecasted quantity reflects expected future availability after planned incoming/outgoing moves.
- Sales deliveries reduce stock; purchase receipts increase stock.
- Basic lot/serial tracking links traceability to individual batches or units where configured.

Description

Sub-tasks

Document the complete CRM workflow from lead creation to opportunity conversion and won opportunity.

Task created with assignees deadline and project

How the Odoo Modules Connect

One integrated business process

CRM manages potential business. Sales confirms the customer order. Inventory fulfills it through delivery. Invoicing records the customer receivable. Payment settles the receivable.

Purchase reverses the direction: procurement creates an incoming receipt, increases stock, generates a vendor payable, and ends with payment.

AI Practical Work

Prompting, improving the prompt, and interview preparation

AI

Prompt 1 — Initial

Explain the complete Odoo Sales workflow from quotation creation to customer payment. Explain each step in simple language and mention how Sales, Inventory, Delivery, Invoicing and Accounting are connected.

Prompt 3 — Interview Questions

Create five Odoo Functional Consultant interview questions covering CRM, Sales, Purchase, Inventory and Invoicing. Provide concise model answers and include practical scenario-based questions.

Prompt 2 — Improved

I am preparing for an Odoo Functional Consultant interview. Explain the complete Odoo Sales workflow step-by-step using Quotation → Sales Order → Delivery Order → Delivery Validation → Customer Invoice → Payment Registration. For each step, explain the purpose, important information, status change and effect on Inventory and Accounting. Present the answer in a clear table followed by a simple real-world example.

What I observed

- The improved prompt produced a more structured, interview-friendly response.
- The AI output was checked against the actual Odoo Sales workflow I performed.
- AI was useful for learning, summarizing and generating practice questions.

Key lesson: better prompts give clearer answers; important Odoo guidance still needs verification.

AI Verification & Responsible Use

Using AI as an assistant — not as an unquestionable source

AI

Odoo Problem Used for Verification

Delivery Order showed “Product Availability: Not Available”. I asked AI what could cause this and what to check.

My Verification

I compared the AI suggestion with my actual Inventory and Delivery screens. The workflow and stock checks were relevant to the “Not Available” message observed in the demo.

Do Not Share with Public AI Tools

- Passwords / API keys / tokens
- Confidential customer or employee data
- Private financial or contractual information
- Proprietary code or internal business documents

AI Suggested Checks

- On-hand quantity
- Forecasted quantity
- Stock movements / reservations
- Incoming receipts
- Warehouse / source location

Verification Rule

Verify important AI-generated information against the actual Odoo environment, official Odoo documentation, or another trusted source.

Challenges & What I Learned

REFLECTION

Challenges Faced

- Understanding how modules are connected
- Following status changes from draft to confirmed/paid
- Tracking inventory after Sales and Purchase
- Interpreting Odoo screens and terminology

What I Learned

- CRM pipeline and opportunity management
- End-to-end Sales and Purchase workflows
- Inventory quantities and stock movements
- Project tasks, AI prompting and responsible verification

Overall lesson:

Odoo is valuable because it connects business functions in one system; strong functional understanding comes from practicing the complete workflow, not memorizing isolated screens.

Conclusion

A five-day practical journey from business process understanding to workflow execution and AI-assisted learning.

CRM

Sales

Inventory

Purchase

Invoicing

Project

I can now explain the purpose of each major Odoo step, trace how a transaction moves across modules, and use AI to support learning while verifying important information.

70% Functional
20% AI
10% Development

Thank you
